Welcome to our 2014 catalogue.

Orders are welcome by mail, email, phone or fax. Please advise the date you wish your trees to be sent or to be picked up.

All prices do not include G.S.T

Packaging and freight will be charged to the client.

Other lines will be propagated from time to time so please do not hesitate to contact us if there is something not listed that you require, or if you want something grown on contract.

A 20% deposit is required to confirm all orders. This deposit to be forfeited if an order is cancelled.

Payment to be made when trees are picked up or dispatched from the nursery.

Payment of accounts is due on the 20th of the month following delivery.

We provide a consultancy service for farm or forestry plantings.

Gift vouchers are also available.

Please note we cannot send trees in Pb3 or bigger, due to courier height restrictions

Our Nursery is open 7 days a week.

Monday - Saturday 9am - 4.30pm

Sunday 10am - 4.30pm

# SPRINGFIELD NURSERY HELP PAGE

## SUGGESTIONS FOR PLANTING SPACE

**Eucalyptus and Acacia for firewood is recommended to plant at any of the following:**

2X2m            apart = 2500/ha or 1000/acre  
2x2.5m        apart = 2000/ha or 800/acre  
2.5x2.5m      apart = 1600/ha or 650/acre

**Eucalyptus and Acacia for timber is recommended to plant at the following:**

4x3m apart = 825/ha or 334/acre, note to be thinned out considerably.

## SPRINGFIELD NURSERY SUGGEST THE FOLLOWING TO HELP MAKE YOUR PLANTING A SUCCESS

Before planting make sure trees are moist, by either dipping in a bucket, under hose or in a trough if handy. Do NOT pull roots apart if Root Trainer stock.

If soil is naturally free-draining, a planting hole slightly wider and deeper than root mass would be sufficient. If soil is heavy, cultivation of soil over a bigger area and below the plant would be worthwhile.

Place root mass in the hole and firm soil round and over the roots, a little deeper (2-3cm) than in the container.

Weeding is very important to plant survival. Grasses and weeds will compete for moisture and nutrients. We suggest spot spraying before planting, letting grass die or discolour, then planting in the sprayed spots. (Roundup or glyphosate, no residual spray).

Mulching produces excellent results keeping weeds down longer, holding moisture in summer and warmth in winter. There are plenty of mulches available, we have found the favourite is pea straw.

There are a lot of ideas about planting times, often it depends on areas and what trees you are planting, container plants give you a longer planting season.

## ROOTRAINERS

These containers train roots downwards by grooves in container walls. This system stops the problem of root binding. All care is taken at pricking out stage to avoid any deformed root system. All grading and pricking out is done by experienced Nursery staff which gets us our good reputation and our known high quality

A rootrainer is divided in 4. Each division is 38mm length x 38mm width x 120mm height

# Eucalyptus

Stock grown in Hilson roottrainers

**1-12 \$1.78 each 13-99 \$1.65 each 100-999 \$1.39 each 1000+ \$1.30 each**

Prices for 100 & 1000 rate apply to one variety only

Euc Ficifolia \$3.04 each in 10cm pots or \$1.65 in RT

**PRICES DO NOT INCLUDE G.S.T**

## EUCALYPTUS SPECIES

### **Eucalyptus botryoides** Southern Mahogany Gum

A hardy easily grown tree, its tolerance of salt winds widens its siting considerably as it produces good timber. Given sufficient space it will grow to large diameters. Timber is used for furniture,turnery, flooring, decking and panelling, a very useful all-round tree. Firewood.

### **Eucalyptus camaldulensis** Red River Gum

Thick trunked widely spreading handsome large tree with multi coloured bark, famed for its qualities of ground endurance, many permanently damp areas could be turned to profit by its use especially for fencing material. Red river gum will accept heavy clay soils that remain water-logged after heavy rain. It will also tolerate drought and frost. It will withstand hard pruning, but should not be planted too close to the house.This is an ideal tree for rural properties, giving shade and shelter. Firewood.

### **Eucalyptus cordata** Tasmanian silver gum

One of the most ornamental of the silver gums. Small to medium, dense growing tree-smooth white bark,mottled with green or purplish patches. White flowers August- September. Hardy.

### **Eucalyptus fastigata** Brownbarrel Cut tail

Because of its extremely rapid growth and an ability to grow in most soils, this tree has been used for timber, firewood and shelter. Timber has been used for framing, flooring, rails, battens and farm gates. Timber is notground durable. Worth planting in managed plantations. Good for wind breaks.

### **Eucalyptus ficifolia** Red flowering gum \$2.83 each in 10cm pots or \$1.57 in R.T.

Pb5 \$12.13

This popular beautiful flowering tree is cultivated throughout the world and has adapted to a wide range of conditions, including coastal, frost tender when young. Ask us about late plantings, get in soon, sells fast. Flowers can almost hide the foliage when fully out, a magnificent floral display.

### **Eucalyptus fraxinoides** White ash

Excellent fast growing tree of good form, for well drained moist sites.Good shelter tree.

### **Eucalyptus globoidea** White stringy bark

Prefers poor, sandy, well drained soils and is frost tender when young. Timber used for outdoor furniture for Auckland City Council Aotea square. Fairly ground durable. Firewood. Flowers white.

### **Eucalyptus globulus** Tasmanian blue gum

Very quick growing, excellent coppicing, excellent firewood, ground durable timber which has lasted upwards of 30-35years. This species prefers deep well drained soils, but will grow in most heavy soils, is frost resistant..

### **Eucalyptus gunnii** Cider gum

A tall, straight tree to 20m. It has a smooth grey to pinkish bark and beautiful, rounded grey juvenile foliage with silvery pink shoots, white flowers in summer. The juvenile foliage is used extensively in the florist industry.Is extremely frost resistant and will tolerate snow. It is one of the hardest of the Eucalyptus, and is tolerant of clays and free soils appear to be equally acceptable. It is proving valuable as a windbreak tree in exposed localities and its timber is being used as a fencing material. Firewood.

**Eucalyptus leucoxylon rosea** Winter flowering gum

Attractive tree planted for its winter flowering habit, varying from cream to red.

It is a magnificent tree for honey and is much visited by tui and bell birds. A hardy tree, tolerant of drought, wind and frost. Prefers good soils, but will grow in clays and lighter loams. .

**Eucalyptus melliodora** Yellow box

As an ornamental tree for shade or individual paddock planting, melliodora is one of the most attractive of the Eucalyptus. It is also a valuable timber tree. Regarded as the best honey producing tree. Does well in clays and light soils and will withstand dry periods and frost. Firewood.

**Eucalyptus muelleriana** Yellow stringy bark

This is a good farm tree, and one that can be grown with profit in heavy clays. The timber is valuable for fencing and milling. At its best on good well drained soils, and will grow on clay over sandstone. E. Muelleriana will grow up well through openings cut in scrub or gorse. It is possum-resistant in most districts. Firewood.

**Eucalyptus nicholii** Narrow leafed black peppermint

A medium sized graceful weeping tree to 20m with a fibrous persistent brown bark. It has a rounded compact crown of narrow light green leaves, often plum-coloured when young and smelling of eucalyptus menthol when crushed. Many small white flowers appear in autumn. This fast growing, adaptable tree will grow in moist soil with good drainage. It is hardy to frost and will tolerate dry periods. Can be pruned hard to encourage shrubby growth. A most ornamental tree.

**Eucalyptus nitens** Shining gum

When grown in clays and moist loams it has grown with extraordinary vigor. It seems to have a liking for really tough clays and grows happily in the most exposed situations. Excellent in hard country exposed to cold winds it has emerged as a strong possibility for the production of mild pale timber useful for many purposes. Very tall. Firewood. Proving to be tolerant of dry sites.

**Eucalyptus ovata** Swamp gum

This tree is hardy and grows rapidly in any reasonable soils. It has proved capable of growing vigorously in very wet areas, such as peat swamps which are water-logged for considerable periods of the year. It is a strong limbed tree and as a shelter tree is able to withstand the stress of strong winds. Moderately durable timber, mainly valued as a strong coppicing firewood tree, can be cropped on short rotation.

**Eucalyptus pilularis** Black butt

Susceptibility to frost limits use, but hardens with age. Best growth has been obtained on well drained slopes with reasonably deep soils, but has performed well on a range of soil types; clays, sands, volcanic ash. Is probably the best milling eucalyptus species planted in New Zealand. Timber is considered to be fire resistant used as engineering timber

**Eucalyptus regnans** Mountain ash

The tallest of the eucalyptus species, known to grow 300feet in ideal conditions. The tree grows well in various areas throughout New Zealand and gives best response in deep loamy soils. It is the most versatile hardwood. Firewood.

**Eucalyptus saligna** Sydney blue gum

A tall growing straight tree, very handsome with a smooth steel grey trunk, often with a stocking of rough bark at the base. E. saligna needs a well drained site preferably with some clay for timber quality. It coppices freely. Firewood.

**Eucalyptus sideroxylon** Rosea Mugga iron bark (red iron bark)

E. sideroxylon is the hardiest of the iron barks; a tree able to stand exposure of some severity. It is called red iron bark on account of its rich, red coloured timber. The timber is ground durable and suitable for fencing or railway sleepers, grows best in well drained soils. Will tolerate extended dry periods and hot summers. Ornamental tree. Good honey tree. Attracts native birds.

**Eucalyptus viminalis** Manna Gum

Attractive, hardy tree tolerant of drought and frost. Reliable coppicer providing good fuelwood. Provides good tall shelter on dry exposed sites.
